

A.M. Bagirov is an Associate Professor at Federation University Australia, Ballarat, Australia. His main research interests are in the area of nonsmooth and global optimization and their applications in machine learning, regression analysis and management of water resource systems. Since 2003 Dr. Bagirov has won four large grants from the Australian Research Council and also two industrial projects. To date, he has published one book and 146 research papers. Dr. Bagirov is an associate editor for seven international journals in optimization and operations research including Journal of Global Optimization, Optimization, Pacific Journal of Optimization and Journal of Industrial and Management Optimization. Dr. Bagirov has delivered 25 invited talks in international conferences and workshops on optimization, data mining and operations research. He has supervised 25 PhD students to completion.
